

# When and why to replicate...

As easy as 1, 2, 3?

EXTRACT results  
from original paper

①.

How to select  
a replication  
target:

REANALYZE: make  
 $p$ -values into Bayes  
factors, & select  
results closest to 1

②.

REFINE selection  
using qualitative  
criteria (e.g.,  
theoretical importance  
& relevance)

③.
